15. A textile cloth for wiping floors consisting of a bending-soft textile material, which is mounted in a detachable manner on a tentering frame of a manual cleaning device, whereby the wiping cloth projects with its edge areas at least partially beyond the holding surfaces of the tentering frame sideways, and is reinforced in said edge areas by reinforcing strips extending over the length of the edge areas, such reinforcing strips being approximately as wide as said edge areas, and being supported with their inner edges on the outer edge of the tentering frame against flapping up of the edge areas, characterized in that the reinforcing strips (4) are realized in the form of thick, dimensionally stable strips of felt.

16. The cloth for wiping floors according to claim 15, characterized in that the reinforcing strips (4) comprise reinforcing ribs.

17. The cloth for wiping floors according to claim 15, characterized in that the reinforcing strips (4) made of felt are glued to the textile material (3) of the wiping cloth (1).

18. The cloth for wiping floors according to claim 15, characterized in that the reinforcing strips (4) made of

felt are sewn to the textile material (3) of the wiping cloth (1).
